

Radiodetection

Press Release, August 2005

All New Digital Inspection from Pearpoint

Radiodetection proudly launches the Pearpoint flexiprobe®, the new versatile rodding system for inspection of pipes, sewers, ducts and conduits. Designed for viewing the internal condition of pipes, conduits and ducts between 1 and 8 inches in diameter (25mm – 200mm) the fully portable system offers the latest in push camera innovation at excellent value for money prices.

Unlike competitive products the new flexiprobe® uses digital imaging and recording technologies, resulting in sharper, clearer images and recording video onto computer media rather than VHS tapes. Additionally the system has high capacity image storage on convenient CompactFlash cards and incorporates simple transfer of video images to PC for inclusion in customer reports. The video transfer facility has been designed such that video can be transferred to PC without the flexiprobe® system having to be carried into a clean office environment.

flexiprobe® has been designed to ensure rugged reliability, with tough stainless steel body cameras with double layer sapphire lens covers. The rugged control centre has a 6.4" VGA anti-glare TFT LCD screen. Typical inspection environments can be a source of biological hazard and flexiprobe® has been designed with this in mind. The command module is rated to IP 55 allowing it to be hosed down after use. Similarly the cameras have been designed to withstand thermal shock and are pressure tested down to 160psi.

Offering versatile modularity the system is available in a wide range of configurations with rod lengths ranging from 30m to 120m, with two interchangeable camera options and a range of accessories including sondes, skids and springs. The system addresses inspection needs from residential, small commercial and basic municipal applications. The system is modular in design, allowing for easy upgrades and component swaps, and is fully upwards and downwards compatible across the range.

Pearpoint, a Radiodetection owned brand, is the world leader in video pipeline inspection technology. Pearpoint customers benefit from an extensive service and technical support facility. There are complete customer support, repairs and parts facilities around the globe, staffed with trained and qualified service technicians for "hands-on" advice and consulting.
